

Darden - Automation Consumer Lab

Summary of Exercises

Each student will have their own Ansible Automation Platform Controller environment that is able to manage 2 nodes. A Red Hat Enterprise Linux server (node1) and a Windows 2016 server (win1). For the purposes of this exercise, we will only be focusing on managing/automating the win1 node. The primary goal is to get students familiar with how to navigate within Automation Controller in order to execute jobs/playbooks and review output.

Exercise 1 - Accessing Your Environment

Go to: <https://play.instruqt.com/embed/redhat/tracks/product-demos-dev>

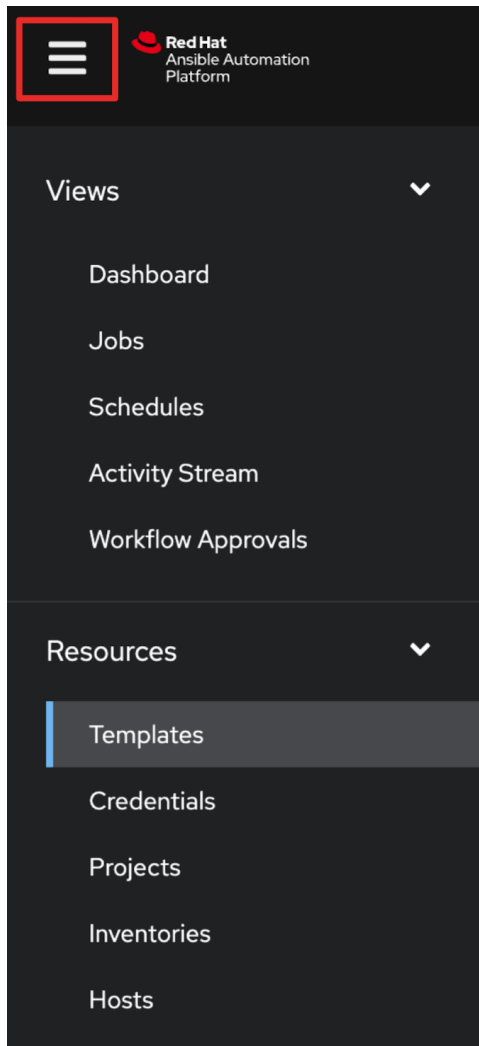

Launch Lab

- Click the green "Launch" button (wait approx 6 minutes)
- Click the green "Start" button

Log in to Automation Controller

USERNAME	admin
PASSWORD	ansible123!

Exercise 2 - Explore Automation Controller Resources

Automation Controller **resources** consist of Credentials, Projects, Inventories, and Templates. You can jump to available resources in the left hand navigation.

Tip: Left hand navigation may be hidden. Click on the 3 bars in the top menu to expand it (see Red Box in image to the left). Read descriptions below as you Click on each of the resources to explore and see what options they provide.

As an Automation Consumer, you will not need to modify any of these, it is just to provide you with the anatomy of automation.

- **Projects** → Review: [Ansible Official Demo Project](#)

Defines a source code repository such as github, gitlab, or Azure Devops (to name a few). This is where the playbooks that have been written live and are version controlled.

- **Credentials** → Review: [Controller Credential](#)

Represent all the secrets needed throughout the automation process. Examples include credentials to access:

- your playbook in the git repository
- the node/server you are automating
- cloud providers' api's for provisioning
- And much more...

- **Inventories** → Review: [Workshop Inventory](#)

A manifest of nodes within your environment that you intend to automate. Inventories will contain hosts and/or groups of hosts, so you can target either one node, a group of similar/related nodes, or the entire inventory.

- **Templates** → Review: [SETUP](#)

Templates are used to run Ansible Playbooks that have been written by content creators and domain experts. However, these templates need a lot of information in order to launch the playbooks. That is where the other resources we just reviewed come in. In order to launch a Template, you will need to add the other resources to the job template definition. The fields collected in the job template should look very familiar (projects, credentials, inventories, and more).

Note: Don't exit out of the SETUP Job Template, as we will be using it for exercise 3 below.

Exercise 3 - Launch a Job Template

As an End User, or Consumer of Ansible, this is where you will be spending all of your time. You will not need to view or edit any of the other resources other than Templates. All Job templates (single playbook) and Workflow Job Templates (series of playbooks) are launched with the simple click of a button.

Click the Launch button in the SETUP job template:

The screenshot shows the Ansible Tower web interface. On the left is a dark sidebar with navigation menus: Views (Dashboard, Jobs, Schedules, Activity Stream, Workflow Approvals), Resources (Templates, Credentials, Projects, Inventories, Hosts), Access (Organizations, Users, Teams), and Administration. The main content area is titled 'Templates > SETUP' and 'Details'. It features a tabbed interface with 'Details' selected. The details are organized into a table-like structure with two columns. The first column lists properties: Name (SETUP), Inventory (Workshop Inventory), Playbook (setup_demo.yml), Timeout (0), Created (11/28/2022, 9:28:53 PM by admin), Credentials (Cloud: Controller Cre...), Variables (YAML, JSON), and a text area for variable input. The second column lists settings: Job Type (run), Project (Ansible official demo project), Forks (0), Show Changes (Off), Last Modified (11/28/2022, 9:28:53 PM by admin), Organization (Default), Execution Environment (product-demos), Verbosity (0 (Normal)), and Job Slicing (1). At the bottom of the details section are three buttons: 'Edit', 'Launch' (highlighted with a red box), and 'Delete'.

Property	Value	Setting	Value
Name	SETUP	Job Type	run
Inventory	Workshop Inventory	Project	Ansible official demo project
Playbook	setup_demo.yml	Forks	0
Timeout	0	Show Changes	Off
Created	11/28/2022, 9:28:53 PM by admin	Last Modified	11/28/2022, 9:28:53 PM by admin
Credentials	Cloud: Controller Cre...	Organization	Default
Variables	YAML, JSON	Execution Environment	product-demos
		Verbosity	0 (Normal)
		Job Slicing	1

Select **Windows** for the Demo Category

Playbooks can use variables supplied via a form (called a Survey) that can dynamically define how the playbook is run. In this particular case, we are executing a Job Template that automates the build of many more job templates for you to play around with. Depending on which Category you select, will dictate which job templates are added to the Automation Controller.

Go ahead and select **windows** in the drop down listbox, then click the **Next** button

Launch | SETUP

1 Survey

2 Preview

Demo Category *

windows

linux

windows

cloud

network

satellite

On the subsequent preview screen you are given the opportunity to review the Job Template configuration. Once settings are confirmed, click the **Launch** button

Review the Job Template output

On the subsequent screen you will see the output of the playbook. This is critical from an auditing perspective. Automaton Controller centrally logs all the jobs that have been executed with key information such as who launched it, when it was launched, the duration, and the exact changes that were made on each of the systems that were targeted.

Scroll through the output to see the user-friendly task definitions that explain what the task is doing (highlighted by the red boxes).

```
5 TASK [redhat_cop.controller_configuration.notification_templates : Add Controller notifications] *** 22:10:39
6 changed: [localhost] => (item={'name': 'Telemetry', 'organization': 'Default', 'notification_type': 'webhook', 'notification_configuration':
7 {'url': 'https://script.google.com/macros/s/AKfycbzxU0bvCJ6zbzfJyicw4Rvx1GE3AZdrK4AR5-TsedCYd70-rtTOVjvsRvqyb3rx6B0g8g/exec', 'http_method':
8 'POST', 'headers': {}}})
9 TASK [redhat_cop.controller_configuration.job_templates : Add Controller Job Templates] *** 22:10:43
10 changed: [localhost] => (item={'name': 'SUBMIT FEEDBACK', 'job_type': 'run', 'inventory': 'Workshop Inventory', 'project': 'Ansible official d
11 emo project', 'playbook': 'feedback.yml', 'execution_environment': 'Default execution environment', 'notification_templates_started': 'Telemet
12 ry', 'notification_templates_success': 'Telemetry', 'notification_templates_error': 'Telemetry', 'survey_enabled': True, 'survey': {'name':
13 '', 'description': '', 'spec': [{'question_name': 'Name/Email/Contact', 'type': 'text', 'variable': 'email', 'required': True}, {'question_nam
14 e': 'Issue or Feedback', 'type': 'textarea', 'variable': 'feedback', 'required': True}]})
15 TASK [redhat_cop.controller_configuration.settings : Update Ansible Controller Settings from dictionary or list of dictionaries] *** 22:10:4
16 9
17 changed: [localhost] => (item={'name': 'SESSION_COOKIE_AGE', 'value': 180000})
18
19
20 TASK [include configuration for windows] ***** 22:10:51
```

See the Fruits of our button clicks:

- Go back to Templates (under **Resources** in the left hand navigation)
- See all the recently added Job Templates with the **WINDOWS /...** prefix that were built to help you automate your windows environment.

Exercise 4 - Automate Windows with Job Templates

Now that we can play around with these new job templates and see how easy it is to perform some otherwise complex and time consuming tasks. To top it all off, because you are only having to click buttons and answer simple questions there is very little margin for human error..

• Install Software

Got to **Templates**

Click the  icon next to **WINDOWS / Chocolatey Install Multiple**

Type **win1** in the survey → Click **Next** → Click **Launch**

Review the output (you just installed nodejs and python on Win1):

```
0 Identity added: /runner/artifacts/4/ssh_key_data (/runner/artifacts/4/ssh_key_data)
1 SSH password:
2
3 PLAY [Chocolatey install multiple] ***** 22:46:49
4
5 TASK [Install specific versions of packages sequentially] ***** 22:46:49
6
7 TASK [Install specific versions of packages sequentially] ***** 22:46:49
8 changed: [win1] => (item={'name': 'nodejs'})
9 changed: [win1] => (item={'name': 'python'})
10
11 TASK [Check python version] ***** 22:48:46
12 ok: [win1]
13
14 TASK [Check nodejs version] ***** 22:48:48
15 ok: [win1]
16
17 TASK [debug] ***** 22:48:54
18 ok: [win1] => {
19     "msg": "Python Version is Python 3.11.0 and NodeJS version is v19.1.0"
20 }
```

Note: You also gathered information about the versions that were installed.

• Deploy a Website

Got to **Templates**

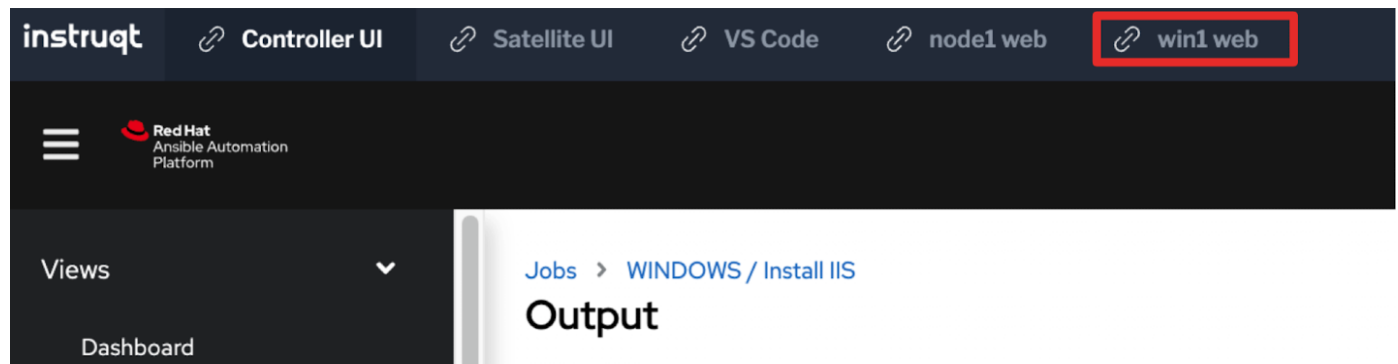

Click the  icon next to **WINDOWS / Install IIS**

Type **win1** for Server Name & <whatever you like> for web content → Click **Next** → Click **Launch**

Review the output (you just installed IIS, started the service and deployed a website on win1):

```
0 Identity added: /runner/artifacts/5/ssh_key_data (/runner/artifacts/5/ssh_key_data)
1 SSH password:
1 SSH password:
2
3 PLAY [Install IIS] ***** 22:57:24
4
5 TASK [Gathering Facts] ***** 22:57:24
6 ok: [win1]
7
8 TASK [Install IIS] ***** 22:57:30
9 changed: [win1]
10
11 TASK [Start IIS service] ***** 22:58:31
12 ok: [win1]
15 changed: [win1]
16
17 TASK [Show website address] ***** 22:58:39
18 ok: [win1] => {
19     "msg": "http://win1"
20 }
21
22 PLAY RECAP ***** 22:58:39
23 win1 : ok=5 changed=2 unreachable=0 failed=0 skipped=0 rescued=0 ignored=0
24
```

Check out your new custom website that you built (click on the **win1_web** tab at the top of the screen):

You may need to click the **refresh icon** on the top right of the screen:

- **Patch a windows server**

Go to **Templates**

Click the  icon next to **WINDOWS / Patching**
